

# L11-Introduction to Computer Networking

## Homework 6 Answers

**Due Date: Jan.13, 2017 by 23:59PM on Google Drive**

Name: Yuta Nemoto

Students ID: s1240234

### Problem 1 (20pts):

Suppose a host has a file consisting of 1 million bytes. The host is going to send this file over a link with an MTU (Maximum Transmission Unit in Data Link Layer) of 1,500 bytes. How many packets (or datagram) are required to send this file?

Data field length is 1480 bytes.

$$1\,000\,000 / (1500 - 20) = 1\,000\,000 / 1480 = 675.675\dots$$

676 packets are required to send the file.

### Problem2 (20pts):

Consider a packet network using 32-bit host address. Suppose that a router has four interfaces, numbered from 0 through 3, and that packets are to be forwarded to these link interfaces as follows. Create a forwarding table using longest prefix matching.

00000000 00000000 00000000 00000000

through

0

00000001 11111111 11111111 11111111

Match: 0000 000

(8bit in decimal: 0)

01010101 00000000 00000000 00000000

through

1

01010101 11111111 11111111 11111111

Match: 0101 0101

(8 bit in decimal: 85)

01010110 00000000 00000000 00000000

through

2

01010111 11111111 11111111 11111111

Match: 0101 011 (8 bit in decimal: 86)

Other addresses

3

No Match

IP address	router
------------	--------

0.0.0.0/7	1
-----------	---

85.0.0.0/8	2
------------	---

86.0.0.0/7	3
------------	---

Other	4
-------	---

課題 3 : 以下のパケットを解析し、必要な情報を取得してください。(30pts)
